DESIGN TEAM:
Jim Henry, AIA, Regional Director Health; Phillip Steffy, Designer; Peyvand AliAmari, Designer

THE CONCEPT:

Access is an ongoing challenge in healthcare. Providers are searching for ways to create the right space, at the right location, with the right level of care. Facility infrastructure costs are rising. We are at the bridge point between full technology integration and traditional medicine. There is a gap between the individual and the current delivery model and we feel this is the space for design improvements.

The Clinic Kit is an online kit of parts that is customized, has a light structure connection to the location it is in, is designed with shipping and assembly in mind, and can be put together with low-cost labor. This idea makes access to anywhere in the world possible, and allows for adaptability to change in the future, whether that is location, size or configuration.

We drew our inspiration from successful models outside of health in two retail providers, Elfa and IKEA.

The design, ordering, delivery and assembly of the Clinic Kit

Functional layout

COMBINATION OPTIONS

Various configuration options

Exploded axon demonstrating the kit-of-part assembly

Basic Kit: (21) columns, (7) solid wall panels, (5) wall panels with window, (6) structural floor panels, (6) Structural Roof Panels, (24) PV Panels, (1) glass door, (3) Interior doors, (4) transom Windows, (1) Toilet Sink Combo, Handrail, Cistern, battery pack, AC Unit
