THE CONCEPT:

Our pediatric inpatient design concept is an 85,000 square foot, two-floor unit that looks at changing the experience for the entire patient care group including patient, family and healthcare providers using evidence-based design. The first floor includes three patient room "neighborhoods," each with eight patient rooms, nurse support, play areas for patients and siblings, and a work café with outdoor dining and lounge space. The second floor includes three additional patient room neighborhoods with nurse and staff support along with the work café, a quiet zone and respite area. Both floors combined include a total 48 patient rooms.
