THE CONCEPT:

Rapidly changing technology has improved healthcare and wellness. As technical breakthroughs are celebrated and marketed as a catalyst for change in medical sectors, the human experience is often overlooked. The lack of familiarity, availability and autonomy induces doubt, worry and distress, ultimately creating a disconnect with one's health. The Navigator combats fear by providing a system of strategies for a Familiar, Integrated, and Transparent wellness network (F.I.T.). F.I.T. environments strategically address and integrate all aspects of wellness. These sites provide opportunity for programs and informal activities to overlap, overflow, and transform depending upon the unique needs of the surrounding area. The Navigator serves as a network connector that promotes human engagement and knowledge hubs within F.I.T. environments. This new wellness network empowers users to engage with an enhanced healthcare system in the way that best works for the individual.

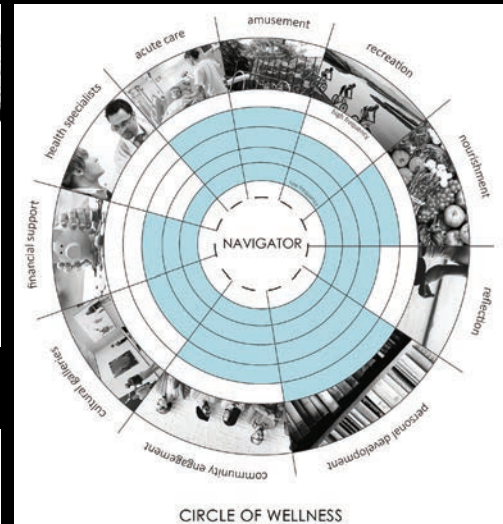

The Navigator provides clarity and combats fear; bridging the gap between humanity and traditional healthcare.

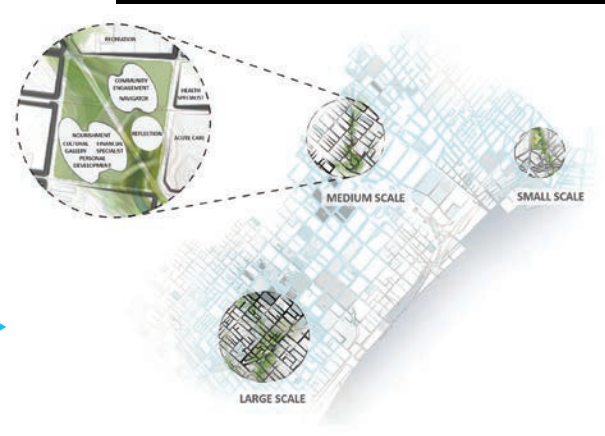

Fear of the unknown is mitigated through a familiar, integrated and transparent healthcare model.

The Navigator is a network that promotes human engagement and knowledge within F.I.T. environments.

F.I.T. environments strengthen neighborhoods and provide opportunities to connect with the Circle of Wellness.

Access to community, resources and support are reasons to regularly connect with F.I.T. networks.
